SUMMARY

Computer Science graduate (B.S., University of South Florida) with software engineering experience at JPMorgan Chase and GE Aerospace, focused on CI/CD, cloud infrastructure, and backend integration. Owned Jenkins pipeline failures end to end, built backend features on AWS, and wrote documentation and design diagrams that let teams understand and maintain systems independently. Clear written communicator with a strong eye for detail.

SKILLS

Infrastructure & DevOps: AWS (EC2, RDS), Terraform, Jenkins, GitHub Actions, CI/CD, monitoring & alerting
Languages & Frameworks: Python, Java, C#, JavaScript, SQL, DXL, React, Node.js, .NET, Electron, SQLite, Git
Engineering Practices: Root cause analysis, unit testing (MSTest, Jest), API testing (Postman), UML design, refactoring, technical documentation, Agile/Scrum

EXPERIENCE

Independent Software Development & Training | Self-Directed **2023 – Present**
Personal automation projects and continued technical coursework *JavaScript | React | Electron | GitHub Actions*

- Built automated website monitors on GitHub Actions that detect changes and send real-time Discord alerts
- Engineered a data pipeline that pulls, filters, deduplicates, and caches postings from multiple sources
- Developed a Job Application Tracker desktop app (React/Electron) with SQLite storage and CSV/JSON import/export
- Coursework: Python automation and AWS cloud fundamentals

Software Engineer Intern (Tools & Simulation) | GE Aerospace **June 2023 – August 2023**
Systems Automation & Data Analysis *DXL | Python | Jenkins*

- Owned diagnosis and resolution of failing Jenkins jobs, restoring internal CI/CD pipelines for the engineering team
- Automated recurring workflows in Python and DXL (IBM DOORS), integrating them into Jenkins jobs
- Coordinated with engineers to identify failing jobs and communicated fixes and status updates
- Documented the automation process so the team could run and maintain it independently

Systems Engineer Co-op (Tools & Simulation) | GE Aerospace **September 2022 – December 2022**
Windows Application Testing Tool *MSTest | C# | .NET Framework*

- Designed UML class diagrams to document core workflows and guide backend implementation
- Refactored legacy backend code to align with the team's .NET coding standards
- Developed and tested an internal C#/.NET Windows application used to validate system behavior
- Built unit tests with ~80% coverage and integrated them into Jenkins to catch defects before release

Software Engineer Intern | JPMorgan Chase & Co. **June 2022 – August 2022**
Disputes Web Application Data Visualizer *React | Java | SQL | AWS | Terraform*

- Built Java backend integrations using JDBC/SQL against AWS RDS for a full-stack internal web app
- Deployed and maintained the application on AWS EC2, supporting the team's shared testing environment
- Validated APIs and UI behavior with Postman and Jest, flagging and resolving issues during sprints
- Led development of front-end data visualization features and presented them to the team at sprint demos
- Collaborated in a 5-person Agile team to deliver the application for disputes data

EDUCATION

University of South Florida (USF) **Tampa, FL**
B.S., Computer Science **May 2024**
GPA: 3.46/4.00
Award: Best Financial Hack, Capital One Challenge (UF SwampHacks VII, 314 participants)
